 Within the cartridges the explosive ingredients (gun powder and priming composition) are hermetically separated from the environment. They will be only opened with effort and under destruction of the article.
 Propellant powder: glycerol trinitrate containing nitrocellulose powder
 Mass per cartridge: essentially dependent on the required power (100-400 mg)
 Exposed propellant powder outside a cartridge is harmful if swallowed and highly flammable; without tamping no explosion risk.
 Packed safety cartridges don't represent a significant risk.
 In case of reaction no dangerous fragments or projectiles will be formed.
 Mechanical or thermal attempts to expose the primer composition lead to an immediate reaction of the dangerous ingredients.
